AccuMail

Order Number: 020003 [ANNUAL ACCUMAIL] Retail Price: \$1395

Includes one year of toll-free technical support and bi-monthly USPS National Database updates.

USPS CASS Certified Address Correction and Coding Software

- CASS Certified by the USPS
- Quickly and easily corrects, parses, and standardizes every codeable address in your database and adds Carrier Routes, ZIP+4, Line of Travel Information (LOT) and Delivery Point Barcode (DPB) information
- Allows you to identify and analyze uncoded addresses so previously undeliverable addresses can be corrected and included with the rest of your mailing; by standardizing addresses, costly duplicates can be eliminated
- Interacts with the USPS National Database so you can see the most current address range created by the USPS, as well as allows you to perform single address lookups
- Creates regional databases so that your records can be coded considerably faster
- Prints USPS Form 3553 facsimiles, standard coding summaries and custom reports. Also prints addresses on envelopes and labels and 11-digit barcodes
- Accepts most database formats, including ASCII fixed length, ASCII delimited file formats and dBase file formats. Interfaces directly with MSWord and WordPerfect. This allows AccuMail to correct and code lists generated by most mailing list or database management programs on the market

System Requirements

Windows 3.1 or Windows 95
2MB disk space (250MB to copy all of the USPS address database to the hard drive)
8MB RAM (16MB recommended)
CD-ROM Drive
